Joshua Hotama

Software Developer | joshuahh554@gmail.com | +62 897 6672 244 | linkedin.com/in/joshuahotama | joshuahotama.netlify.app

Full-stack developer with 2+ years of experience building scalable web applications across front-end, back-end, and UI/UX — proficient in Next.js, React, Laravel, Node.js, and Tailwind CSS, with additional exposure to .NET, Kotlin, and Android development. Proven track record delivering production-ready systems including multi-role platforms, intelligent tutoring systems with Bayesian Network algorithms, e-commerce, and ERP-integrated tools across the healthcare and pharmaceutical industries. Comfortable working independently or in distributed teams following Agile/Scrum workflows, with strong skills in Figma-based UI/UX design, RESTful API integration, and database management (MySQL, MongoDB, PostgreSQL). Committed to clean code, fast iteration, and continuous growth in every project.

Work Experience

PT. Eagle Indo Pharma – Tangerang — November 2025 - Now

Software Developer

- Developed a company E-Training platform (learning center) using Next.js and Bootstrap, with UI/UX designed in Figma.
- Engineered a comprehensive E-Training system supporting three user roles (users, trainers, and administrators) with distinct permissions and functionalities.
- Implemented backend enhancements for the company profile website.
- Developed new features to support production-related workflows.

PT. Cermai Makmur Abadi International – Tangerang — July 2024 - December 2024

IT Intern

- Built "Cermai Shop," an internal web application to view stock, manage orders, and process payments using Laravel.
- Studied and demonstrated ERP system setup from company establishment phase.
- Maintained the KITEC website used by Bea Cukai (Indonesian Customs) for recording goods imported for export purposes, built with .NET Framework.

PT. Kalbe Farma TBK – Cikarang — February 2024 - June 2024

Web Developer Intern

- Built several internal tools to increase input efficiency using MERN Stack and Laravel.
- Developed a machine scheduling website for the production department (scheduling span: 1 week / 8 days).
- Created a Preventive Maintenance (PM) system enabling engineers to add and manage monthly maintenance schedules.
- Created UI/UX designs in Figma for two additional conceptual projects.

Education

Multimedia Nusantara University – Tangerang — 2021 - 2025

Bachelor of Information Technology, GPA: 3.59/4.00

- During my studies, I learned web programming, which includes web development, computer networks, internet technologies, network and internet security, programming language concepts, artificial intelligence algorithms, and human-computer interaction concepts. I graduated with a GPA of 3.59.

Project Experience

Elearning-Ku Website (elearningku.online) — February 2025 – July 2025

Software Developer

- Developed eLearningku.online a full-stack e-learning platform implementing an Intelligent Tutoring System (ITS) combined with a Bayesian Network model. The system delivers core e-learning features such as course materials, assignments, and quizzes, while automatically analyzing student performance over four tasks in a semester. Based on error analysis, it generates personalized additional assignments with adaptive difficulty distribution (easy, medium, hard) calculated using Bayesian posterior probabilities. This approach ensures targeted remediation by adjusting question difficulty according to each student's learning needs.

Project Chamberlain August 2023 - December 2023

Front End Android Studio & UI/UX

- Created a front end and designed an Android application called chamberlain, used for organizations at universities that have a fine system, all fines are recorded there and can be saved if you still need it.

Project The Struggles August 2023 - December 2023

Game Developer

- Creating an FPS game using Unity. I made a map set in a hospital, the hospital is a maze so players have to find their own way out using the weapons that have been prepared while being careful because there will be zombies chasing the player.

Medang Lestari February 2023 - September 2023

Back End Developer

- Backend responsibility for the entire website from the admin or website user. To enter input such as reports and reports, the function is to save several images at once, using different database tables and then calling them into 1 file which will be generated in PDF. The purpose of this website is to make it easier to create reports so that security does not need to send them manually.

Project Website OMB (Orientasi Mahasiswa baru) February 2023 - September 2023

Front End & UI/UX

- An information website used for new students entering the new world of college. This information is made in the form of a website that is pleasing to the eye and has a tap tap game.

Cendana Motor August 2022 - December 2022

Back End Developer

- Working on the backend for the website which functions as a monitor from admin to user. This input system is carried out by the admin and will be visible to the user, has a security system for logging in and registering (only for admins).

Project UMN Life & 7Days February 2022 - June 2022

Front End Developer

- A website that functions as a university introductory game website using javascript. This game is made like a college student from actually entering until the end of the semester when the game is finished. But to complete the game there are several bars that must be maintained and everything must be balanced. There is a button that must be clicked and when the button is clicked it will affect other bars and also affect the clock.

Skill

- **Front-End** : HTML, CSS, JavaScript, TypeScript, React, Next.js, jQuery, Tailwind CSS, Bootstrap, Kotlin
- **Back-End** : PHP, Node.js, Express.js, Laravel, C#, Java, Python, .NET
- **Database** : MySQL, MongoDB, PostgreSQL, SQL Server
- **Tools** : Git, Figma, Canva, Jira, Notion, Microsoft Office, Android Studio
- **Concepts** : RESTful API, MERN Stack, Agile/Scrum, ERP, API Integration, JSON, R, C
- **Other** : UI/UX Design, Wireframing, Version Control, Debugging, Problem-Solving
